

OVERVIEW AGENDA

Charting the course: exploring the past, present, and future of AMD

Tuesday, Oct 20 — Mapping the present

8:30am–4:30pm | Breakfast & lunch provided

1. The great voyage of AMD

- Opening remarks
- Keynote presentation | Christin Hanigan, PhD (APHL)

2. Genomic journeys: Case studies from the field

- Invasive meningococcal disease outbreak
- Invasive Group A *Streptococcus*
- *Hepatitis C* genomic surveillance
- *Cyclospora* outbreak

3. Diving in: Concurrent breakout sessions

- **Genomic Sequencing track | Streamlining sequencing: Practical automation for public health laboratories**
Attendees will gain strategies for implementing automation that strengthens efficiency, consistency, and overall sequencing quality through applied examples and workflow-focused discussion.
- **Bioinformatics track | Smooth sailing with Nextflow: Pipelines, containers, and real-world troubleshooting**
Attendees will learn to run Nextflow pipelines confidently and resolve common workflow issues through collaborative troubleshooting and an introduction to containerization.
- **Genomic Epidemiology track | Setting the compass: Prioritizing specimens for sequencing with purpose**
Attendees will explore factors shaping sequencing decisions, adapt sampling strategies for surveillance or outbreaks, and enhance lab-epi communication through an interactive decision-making exercise.

4. Adventures in collaboration: Cross-silo liaison panel

Facilitated Q&A exploring how interdisciplinary teams collaborate across traditional silos to improve public health impact.

Evening networking social (optional) 5:30pm

MIDWEST AMD
SYMPOSIUM & WORKSHOP

OVERVIEW AGENDA

Charting the course: exploring the past, present, and future of AMD

Wednesday, Oct 21 — Navigating the future

8:30am–4:00pm | Breakfast & lunch provided

1. Building tomorrow's harbor

- Genomic epidemiology: the role, the program, the field
- Future-proofing AMD programs: Group discussion
Coming together to identify common challenges and share strategies for optimizing workflows to future-proof programs.

2. All hands on deck: Collaborative tabletop exercise

An immersive, cross-disciplinary tabletop exercise in which participants will practice decision-making and apply key tools from their respective disciplines to learn how coordinated approaches enhance routine genomic surveillance and support rapid, effective outbreak response.

3. Tools for the next journey

- AMD Platform | David Jones, PhD (CDC)
An insider overview and demonstration of AMD Platform followed by an extended Q&A session.
- Expanding the AMD toolkit
 - Indoor air sampling for respiratory virus surveillance
 - Dual validations of tiled-amplicon and hybrid-capture approaches for SARS-CoV-2
 - Leveraging the MAAGE genomic surveillance platform for cluster investigations
 - Decision tree framework for advancing outbreak analytics

4. Plotting your next coordinates

- Feedback & evaluation
- Final reflections & takeaways
- Concluding remarks

MIDWEST AMD
SYMPOSIUM & WORKSHOP
